Overview & HTML5 Elements

ide pre-styled components and templates which are easy to add to any website.

a style sheet language that describes how HTML elements are displayed. It is the design that is layered over the top of an HTML web page.

re you specify the height and width of elements, and those values remain the same regardless of which operating system or browser you use to access the website.

nich the height and width of elements is flexible and can expand or contract based on the browser window, the operating system, and other user preferences.

s utility classes that are scoped to individual CSS properties, which helps in building custom designs in HTML files.
